

Ali Haider

Full Stack Developer — AI Integration Specialist

📍 Khushab, Pakistan | 📞 +92 312 3815448 | ✉ Email | 🔗 LinkedIn | 🐙 GitHub |

Summary

BS Computer Science student (7th Semester) with experience in Software Development, AI, Machine Learning, Databases, Computer Networks. Proficient in C++, Python, JavaScript, SQL, MySQL, Git, and Linux. Strong problem-solving and system design skills demonstrated through multiple academic projects.

TECHNICAL SKILLS

Languages:: C++, Python, Typescript, JavaScript, sql, Html, Css,

Languages: MySQL, ER Modeling, Database Design, Oracle, MongoDB

AI/ML: Machine Learning, AI, Data Analysis

Networking&Cloud: QoS, Load Balancing, Computer Networks, Cloud Computing, Cisco Packet Tracer

Tools: Git, GitHub, Linux, VS Code, MySQL Workbench, Azure

Projects

BookMind – AI-Powered Personalized Book Recommendation System

Engineered a full-stack intelligent book recommendation system leveraging React, Node.js, Express, TypeScript, MySQL, and Drizzle ORM. Integrated OpenAI LLM to analyze user reading preferences and generate personalized recommendations, with OAuth-based authentication and Google Books API for real-time book metadata. Built a modular, scalable architecture using tRPC for type-safe communication between frontend and backend.

Real-Time Multilingual Communication System (AI)

Engineered a full-stack AI-powered video conferencing platform supporting multilingual communication through speech recognition, real-time translation, and speech synthesis. Designed scalable backend services for meeting management, user authentication, language customization, and meeting recording to enable seamless collaboration between users speaking different languages.

FoodMap (Database Systems)

Built a full-stack restaurant discovery system leveraging Flask, MySQL, JavaScript, and Google Maps API. Implemented a normalized relational database, role-based authentication, CRUD functionality, geolocation services, and review management to deliver personalized nearby restaurant and menu recommendations through a scalable web application.

Online Learning System (Computer Networks)

Designed and simulated a scalable online learning network using Cisco Packet Tracer, implementing VLAN segmentation, inter-VLAN routing, QoS, DNS-based load balancing, and server redundancy. Configured streaming, web, authentication, database, and monitoring services to ensure high availability, reliable video delivery, and efficient traffic management for a modern e-learning environment.

Global Cryptocurrency Exchange Platform

Global Cryptocurrency Exchange Platform (Advanced Database Systems) Developed an enterprise-grade cryptocurrency trading platform using React, Node.js, Oracle Database, and MongoDB with a hybrid database architecture. Implemented JWT-based authentication, automated order matching, ACID-compliant transaction processing, stored procedures, triggers, row-level concurrency control, and real-time portfolio management to ensure secure, scalable, and reliable cryptocurrency trading.

Education

Namal University, Mianwali

Bachelor of Science in Computer Science (BSCS)

Expected Graduation: 2027

Languages

Urdu: Native | **English:** Professional Working Proficiency
